

Cloud Servers

Cloud Server(s) are delivered from our Enterprise Grade Managed Cloud Platform. Cloud Server is a Virtual Private Server that includes a self-service portal, unlimited internet traffic and is protected by Firewalls. Cloud Server is a cost-effective way to deploy and operate a server for any purpose. The service boasts no setup costs, no traffic charges, complete flexibility to scale capacity up and down when needed and a self-service portal for your complete control of your server(s).

Features

- Select from T-Shirt size servers or customise your server
- Built on industry leading DellEMC networking, servers, and storage hardware
- Built on VMware vSphere hypervisor software
- Powerful Intel Xeon Gold and Platinum processors
- Scale from 1GB to 1TB of RAM
- Scale from 10GB to ~ of storage
- Scale from 1vCPU to 64 vCPU's
- Choose from All flash, HDD, or SSD Storage

- 99.95% uptime SLA
- Cloud Server backup is optional
- Windows and Linux management options
- Unlimited Internet traffic
- Self Service Portal

Operating Systems

A range of Windows Server, Ubuntu and RedHat operating systems are supported on the cloud server platform. Pre-packaged images are available to get your cloud server up and running in minutes.

Dedicated Servers

Dedicated servers are for workloads that require bare metal access to hardware. Dedicated servers are built to order bespoke hardware configurations based on Dell 1,2 & 4RU industry leading servers with Intel or AMD processors. We offer dedicated servers as a monthly fee. Operating system management is optional. Dedicated servers can be used in combination with other services such as:

- Direct Connect
- Shared Firewall
- Shared Firewall - VDOM
- Dedicated Firewalls
- Shared Internet Access
- Dedicated Internet Access
- Cloud File Storage
- Cloud Backups

You can also use a combination of dedicated and shared services to meet specific requirements.
